

Fleetguard Lubricants for Africa and the Middle East

Maximum Protection to Boost Your Productivity

When you protect your equipment with Fleetguard lubricants, you also protect your business from unnecessary downtime and costly repairs. Our superior engine, hydraulic, gear and transmission oils lubricate critical moving components to reduce friction and wear while giving you the highest possible performance.

Choose lubricants tested in the real world to help prevent damage, extend equipment life and reduce your total cost of ownership.

Choose Fleetguard.

Right products. Trusted advice.

Currently only available in Africa and the Middle East. Contact your local representative for more information, visit [Fleetguard.com](https://www.fleetguard.com)

Engine Oils

Superior oils for optimal engine protection and performance

Suitable for multiple heavy-duty applications, Fleetguard engine oils meet regional emissions regulations and provide exceptional lubrication to reduce friction and subsequent wear and tear. For the ultimate peace of mind, pair Fleetguard engine oils with our full line of oil filters.

Some of our engine oils contain lower SAPS. And that's a good thing. Low-SAPS and mid-SAPS engine oils contain less sulphated ash, phosphorous and sulphur to better protect sensitive exhaust gas aftertreatment systems.

Engine Oil: 10W-40 CI-4 UHPD

This Ultra High Performance Diesel (UHPD) synthetic engine oil meets Euro 4, 5 and 6 standards for cleaner engines, fuel savings and extended drain intervals. Plus, low SAPS technology helps protect exhaust systems.

Engine Oil: 15W-40 CI-4

Our mineral-based Super High Performance Diesel (SHPD) engine oil for heavy-duty diesel engines is suitable for Euro 2, 3, 4 and some 5 engines. Approved by Volvo, Renault and Mack for cleaner engines, wear protection and stability.

Engine Oil: 15W-40 CK-4

Suitable for diesel and gasoline engines where API SN is prescribed, this mid-SAPS universal heavy-duty diesel engine oil is the right choice for cleaner engines, wear protection and stability.

Engine Oil: 20W-50 CI-4

Designed for diesel, gasoline and LPG engines, this mineral engine oil for mixed fleets achieves engine cleanliness, wear protection and fuel savings, even under heavy loads.

Fleetguard engine oils are available in 5L and 20L bottles and 208L drums.

Hydraulic Oils

Superior protection for low-maintenance hydraulic system operation

Fleetguard hydraulic oils effectively transmit power while reducing friction between moving parts, extending the life of your hydraulic equipment. They also provide superior protection against copper and steel corrosion, rust formation, foaming and aging.

Our hydraulic oils have excellent filterability, allowing your hydraulic filters to provide better system protection.

Hydraulic Oil: HLP 46 and HLP 68

These mineral hydraulic oils reduce pump wear and extend equipment life. Their clean, solvent-refined paraffin base and thermal and oxidative stress-resistant additive package protect against corrosion, foaming and rust while ensuring superior cleaning performance, thermal stability and excellent filterability. The higher viscosity of HLP 68 is more suited for heavier-duty applications operating in more demanding conditions.

Fleetguard hydraulic oils are available in 20L bottle and 208L drum.

Gear/Transmission Oil

Advanced wear protection keeps your gears going

Fleetguard transmission oils provide maximum protection even with heavy shock loads under the most severe conditions. Advanced additives ensure surfaces are permanently coated with a thin film of oil to prevent corrosion. Our transmission oils are specially designed for hydraulic and transmission systems of modern off-highway equipment, as well as for trucks with a Caterpillar TO-4 or trucks and buses with an Allison C-4 specification. A mineral base oil and tailored additive package achieve superior oxidation stability and wear protection.

Fleetguard gear oils maintain good fluidity even at low temperatures, ensuring optimal performance all year round. Follow OEM guidelines for selection of correct viscosity level.

Gear Oil: 80W-90 GL-5 and HPG EP 85W-140 GL-5

Our mineral gear oils with the latest additive technology provide metal-to-metal protection, corrosion resistance and thermal stability as they lubricate hypoid gears, hub reductions, gearboxes, PTO (Power Take-off) gears, transfer cases and differentials. Highly resistant to oxidative degradation and aging, Fleetguard gear oils do not affect seals. Suitable for API GL-5, MIL-L 2105-D and Mack GO-G specifications. 85W-140 can also be used where MB 235.0 is stipulated.

Fleetguard gear oils are available in 20L bottle and 208L drum.

Transmission Oil: Powershift 10W TO-4, Powershift 30 TO-4 and Powershift 50 TO-4

These high-quality mineral-base oils for modern off-highway applications include a specially developed additive package for hydraulic and transmission systems. With a high resistance to oxidation, they provide excellent protection against friction and wear to extend equipment life. Recommended for use in powershifts, automatic and manual transmissions, hydraulic systems, final drives and wet brakes.

Fleetguard transmission oils are available in 208L drum.

Lubricant Product Types And Part Numbers

Name	Product Type	Volume [liters]	Container	Part No.
Engine Oil	15W-40 CI-4	5	Jug	CL4100600MA EEJ
Engine Oil	15W-40 CI-4	20	Pail	CL4100600JX EEP
Engine Oil	15W-40 CI-4	208	Drum	CL4100600JA EED
Engine Oil	15W-40 CK-4	5	Jug	CL4100200MA EEJ
Engine Oil	15W-40 CK-4	20	Pail	CL4100200JX EEP
Engine Oil	15W-40 CK-4	208	Drum	CL4100200JA EED
